

CONNECTED AND OVERLAPPED SHAPES ENHANCEMENTS

ABSTRACT OF THE DISCLOSURE

A method of ordering visual objects presented on a display includes
5 comparing visual objects to be placed in an overlapping condition and determining
from the comparison the order in which the visual objects are to be placed. The
visual objects are re-ordered and placed in the overlapping condition in accordance
with the determination. Methods of creating connecting links joining source and
destination visual objects as well as overlapping object and object-connecting tools
10 are also provided.
